

AIA Vitality Centre Case Study

Case Study:
AIA Vitality Centre
Electrical Contractor:
SKS Technologies
Trader Electrical Products used:
Leopard

In 2022, the Collingwood Football Club's iconic headquarters at Olympic Park became the AIA Vitality Centre. The renaming of the centre after the club's long time sponsor coincided with a \$15 million transformation of the facility into a world class training and administrative base. This includes the AFL Men's team, AFLW Women's team and Magpies Netball Team

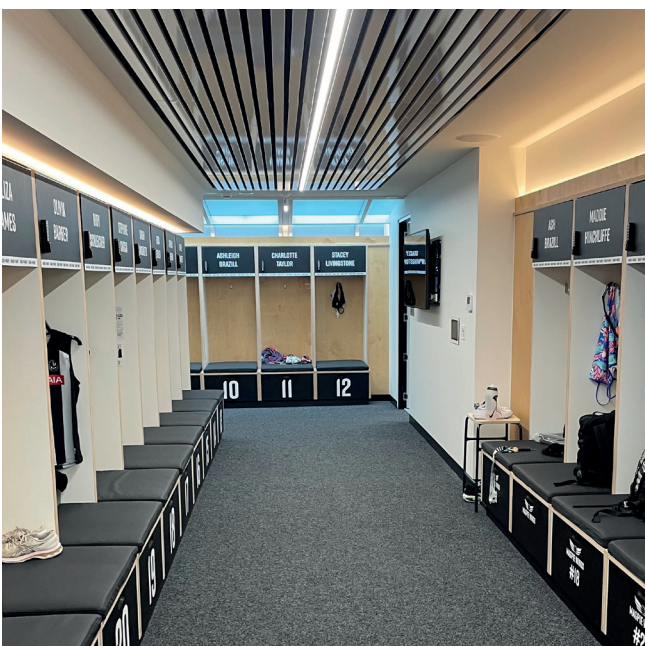

It is now a multidisciplinary hub for sports performance, development, and medical and sports research in partnership with Monash University, supporting the eight teams that now play under the Collingwood name. This includes the AFL Men's team, AFLW Women's team and Magpies Netball Team.

When it came to the electrical fit-out of the change rooms, electrical contractors, SKS

Technologies recommended our Trader Leopard range of integrated double power point and USB chargers to cater for needs of the modern player to charge phones, iPads and laptops.

"We are very familiar with the Trader range of products. This is the first time we have used the Type A&C charger and the fit-off was straightforward. Everyone is satisfied with the results."

John Murphy,
Project Manager, SKS Technologies

Over 100 USB chargers were specified for the install, including each and every player's locker.

Note that the power outlets are auto-switched. Each outlet becomes active when a plug is inserted. This provides a slimmer and cleaner looking design profile.

Power and USB charging is concealed in the player's individual locker, and accessed via security keypad.

The dual USB charger features both Type A&C charging ports, with the type A catering for the very latest mobile phone charging ports. USB outlets deliver an impressive 3.4A charging on one device.

Leopard is Trader's slim offer to the market and the Leopard USB chargers feature a slim 7.5mm wall plate, the low profile is not only stylish but ideal where space is limited.
