**▲ Note: See Socket Pin Configuration diagrams on following pages**

## COMBINATION SWITCHED SOCKETS WITH RCD - PRODUCT INFORMATION

### Functions:

The Switched Socket provides a standard power outlet for connecting electrical devices. RCD Protection incorporates a Residual Current Device, monitoring the circuit's electrical current. Upon detecting leakage, signalling a potential fault, it cuts off power to prevent electric shock.

### Benefits:

Conveniently combines a power outlet and safety feature in a single unit. Provides added protection (safety) against electric shock, especially in areas prone to water exposure.

### Applications:

Ideal for Wet Areas or outdoor environments with exposure to moisture. Ensures Compliance by meeting Australian electrical & safety standards.

*Note: These units are made to order with up to 4-week lead time. Please enquire for availability, and pricing.*

## NEW Buffalo Key Lock Switches

**BUSW Key Lock Switch Series** comes as standard in various current and phase configurations and features a lock-off function, indicated by the K1 code at the end of the product code.

When the key is removed in the OFF position, the switch locks to prevent unintentional operation. These switches also include an overriding padlock-off facility, consistent with the standard Buffalo range.

In addition to the K1 model, the range includes a K2 variant that allows the key to be removed in either the on or off position, preventing unintentional operation.

To change modes, the key must be inserted.

The key switch system uses barrels for either common key systems or random configurations, depending on requirements.

These specifications must be provided when ordering through the Customer Service Team. Special key combinations may have longer lead times.

## Chemical Resistant Range - Acid test proven

Our new Buffalo Chemical Resistant range is designed to meet the needs of harsh industrial environments where intensive cleaning and chemical contact would otherwise damage standard switchgear surfaces.

### Resistant GREY

#### Grey & Purple

Resists: Alkaline and caustic cleaners and foaming agents eg. Sodium Hydroxide and Potassium Hydroxide

Typical applications: Food processing plants, fast food outlets & workshops

### Resistant ORANGE

#### Orange & Dark Red

Resists: Acidic based cleaners eg. Hydrochloric, Nitric and Sulphuric.

Typical applications: Wineries, commercial kitchens & food preparation storage tanks

### Resistant WHITE

#### White & Dark Red

Typical applications: For food preparation areas that use acidic type cleaners but require a stylish presentation to match the decor. Typical applications include supermarket deli areas, restaurants and food preparation facilities.

**Buffalo Chemical Resistant for long life performance.**

**SCAN QR CODE TO FIND OUT MORE**

Match the range material selection\* against the chemical cleaners used.

\*Refer to the Buffalo Chemical Resistance Chart.
