PURPLEBOX

The Original Live Wire Protective Cover

The Purple Box is a live wire installation cover that creates a safe barrier for tradespeople and individuals during any new build or renovation.

Exposed wires and makeshift barriers eg. Junction boxes are non-compliant and pose a safety hazard and possible fine for the installer.

The Purple Box is a fit-for-purpose design that simply screws into any standard sized C-clip, stud plate, wall box or plaster bracket. Once installed, The Purple Box, rated at IP44, meets all safety requirements and leaves the circuit safe and powered eliminating the need to climb through roofs to disconnect power.

Plasters, gyprockers and tilers can also work around the install without creating damage or extra work for the electrician to repair.

The Purple Box labelled.

Safe temporary switch lighting.

Safe install ready for plastering.
